# InnGauge. Stop your profits checking-out.

## **What is InnGauge?**

InnGauge is the market leader in providing low cost, feature rich power-management solutions to the hospitality industry.

## **What does InnGauge do?**

InnGauge saves money by putting you back into control of your electrical energy consumption on a room-by-room, socket-by-socket basis.

- Know how much energy each electrical socket in every room is using in real time.
- Have the power to turn on or off each socket or be able to reduce how much energy the socket is using, from a single central control panel.
- Full access to historical power consumption reports, instantly.
- Know if a guest has left a door or window open in their room.
- Know if a guest (or anyone else) is in a room using our motion detection technology.
- Measure each room's temperature and remotely control it's A / C.

## **How does InnGauge work?**

InnGauge is made up of two components, the socket and the control panel.

The first step is the installation of the InnGauge socket in every room you wish to monitor. The sockets are completely invisible to guests.

The InnGauge control panel is then installed on a PC at the hotel reception. Each InnGauge socket silently communicates with the InnGauge control panel through the existing electrical system.

The InnGauge control panel provides full access to our suite of next generation, feature rich, power-management tools.

## **The InnGauge system really must be seen to be believed!**
